

WhiptecBio Hedge & Tree Guards

Our planet is changing, join us on our journey

whiptec Bio WhiptecBio guards have been developed with advice from arboriculturists for over 9 years and have been trialled in a variety of locations and conditions.

They help create a more realistic natural climate without the extremes of hot and cold temperatures and provide shelter from extreme weather for the young whips, resulting on stronger initial establishment and a much higher survival rate. They also provide vital protection from browsing animals.

Available in 500mm and 600mm options.

Sustainable, biodegradable, and compostable

A natural additive is mixed with the moulded fibre that makes these guards fully biodegradable and compostable. Holes are added at the top to increase airflow and prevent mould and other unwanted residues forming, whilst increasing the amount of light from above.

There's also no need to remove guards, as they will degrade back to their natural state.

Features of WhiptecBio guards:

- Made from recycled material and 100% sustainable
- Estimated lifespan of 2-4 growing seasons (please note this can vary depending on location, climate, and site conditions)
- Flat packed and easy to install
- No need for clips or plastic ties
- Manufactured in the UK
- Soil Association Approved
- 500 x 50 x 50mm and 600 x 70 x 70mm size options
